The Face of Winter

How to Protect Your Skin in the Dry, Cold Months

Barbara Hey

Winter can be tough on skin, but there's much you can do to defend against the assaults of the season. The skin's primary role -- to protect the body -- is ever more important in extreme weather, and in most locations, that means extreme cold outside and dry, over-heated air inside during the winter. Your epidermis must "weather" these drastic fluctuations in temperature, and often the result is chapped, scaly, flaky skin.

Facing the Frost

The biggest wintertime concern is dehydration. In colder climates, you definitely need to increase the protection quotient. "You must

months. And this is especially important for the face. And if much time is spent outdoors skiing, snowboarding, or walking, for example, your complexion needs heavy-duty protection from brisk wind and winter sun as well.

"People often forget about sunscreen in the winter," says Schumann-Ortega. For regular outdoor time -- a few hours a day -- a sunscreen with an SPF of 20 should be sufficient. But if a winter trip on the slopes or shore is part of the plan, sunscreen with a higher protective factor is needed, even if your time is spent beneath an umbrella. "Both snow and sand reflect the sun," she says, so don't be caught unprepared. Double your efforts to protect the parts of the

Happiness is when what you think, what you say, and what you do are in harmony.

Protect your skin from winter's harsh elements for a healthy complexion year round

over-treat skin to keep it hydrated," says Barbara Schumann-Ortega, vice president of Wilma Schumann Skin Care in Coral Gables, Florida. That means a shift from lighter skin care products used during warmer months to winter-weight products, such as thicker, cream-based cleansers and moisturizers. These will provide stronger barriers against the harsh environment of winter

face particularly prone to display the effects of dryness: The lips and the area around the eyes need a continual shield against the elements. Ask your skin care professional which products are appropriate for your skin type and effective, seasonal moisturizers and sunscreens.

"When it's cold, you lose blood flow to the skin," says Schumann-Ortega. The result is a dry, dull tone. Facial treatments can increase circulation and rejuvenate a healthy glow. But, Schumann-Ortega cautions, be careful with peels and resurfacing treatments during the winter, as they can do more damage than good with skin that's already taxed from the harsh environmental conditions.

Winterizing the Body

It's not just the face that suffers in the winter. Skin everywhere dries out, and gets that flaky look and uncomfortable winter itch. Hot baths -- a delightful antidote to the chill -- can further exacerbate dry skin. The solution? Add 10 drops of an aromatic essential oil to the bath to moisturize as you soak. (Lavender is particularly soothing to dry skin.) Then apply an emollient moisturizer -- a product that feels particularly thick and creamy to the touch, like a body butter -- geared for extra dry, rough, chapped, or cracked skin. Apply it immediately after drying off, when the skin can most readily absorb the lotion and restore its barrier. If dryness is still bothersome, indulge in a salt rub and full-body conditioning wrap to re-moisturize.

And don't forget feet and hands. The feet, hidden by socks and boots all winter long, often go neglected this time of year and need attention, but the most obvious casualties of winter are the hands. Exposed to the elements and the subject of frequent hand-washing during the cold and flu season, hands can turn to rawhide just as holiday parties go into full swing -- not an elegant look for holding onto a champagne flute.

This is the season to slather hands with heavy, oil-rich cream at night and cover them with gloves. And don't forget feet: they also require the same special care. Consider a moisturizer for them in the evenings and sleep with socks on. In the morning, your feet and hands will feel soft and moisturized. Your skin care professional can recommend appropriate gloves, socks, and a home-care routine for this process. In addition, treat hands and feet to regular spa treatments to exfoliate dead skin cells, and paraffin treatments to replenish and moisturize.

Relax and Enjoy It

In winter, and all seasons, stress can disrupt even the best skin. "We always ask clients what's going on in life, since adrenaline, holiday pressures, and even joy can have an effect on body chemistry," says Schumann-Ortega. The skin reflects it all. "Some clients may come in after four weeks and they look like a train wreck," she says. So do your best to minimize the effects of stress with exercise, meditation, and proper diet. And don't skimp on the self-care. Schedule time for pampering, relaxing treatments.

Some final tips:

- Drink water. Even when there's a chill in the air and thirst isn't overwhelming, water consumption needs to be high to combat the dry air.

- Avoid products with a high percentage of synthetic ingredients (propylene glycol, petroleum), chemical detergents

(sodium laurel sulfates), and artificial colors and fragrances.

- Employ quality skin care products suited to your skin type.

- Check your medications. Illness and ongoing pharmaceuticals can upset pH balance.

- Incorporate nutritional supplements into your skin health regimen, such as essential fatty acids, zinc, magnesium, vitamin A, and B vitamins.

Winter doesn't have to take its long, hard toll on your skin. Ask your skin care professional about hydrating products and circulation-enhancing treatments to ease the long, dry months of winter. After all, spring is just around the corner.

When you're outside in harsh conditions, cover up with gloves, scarves, and sunscreen.

A Walking Workout

Have Fun While Burning More Calories

Imagine the lone hiker, backpack laden with sleeping bag and bedroll, wielding a well-worn walking stick as she climbs the side of a snow-covered mountain. For centuries, trekkers have used walking sticks, partly as a defense against attacking wildlife, partly to aid in balance, and partly as support on long, arduous climbs. But in recent years, many hikers have replaced the single wooden walking stick with hiking poles.

Held in both hands and used to distribute weight more evenly through the four limbs, wilderness hikers have found poles invaluable for safety, efficiency, and comfort on long hikes. What wilderness hikers have known for some time now is that walking poles are a great way to relieve pressure on knees, ankles, and the back. They encourage better posture and provide a total body workout by engaging the upper body.

Now, hiking poles are showing up in urban areas as fitness walkers discover the benefits they provide. Nordic

walking--similar in technique to cross-country skiing--is a great way to get a whole body workout, increase oxygen consumption, and burn more calories than regular walking or even speed walking. This total body workout burns 40 percent more calories and consumes 25 percent more oxygen. Poles can be purchased at most outdoor sporting stores, along with rubber tips for use on paved paths.

TECHNIQUE

Adjust your poles to approximately 70 percent of your height and loosely secure the straps around your wrists. Hold the poles at an angle behind you so they propel you forward with a slight bend at the elbow. Use an opposite hand-and-heel motion as you walk--right heel strikes as left pole tip contacts the ground. And you're on your way! Don't be shy with your poles. Remember: You're burning 40 percent more calories.

Add walking poles, and burn more calories.

The Case for Chocolate

New Studies Show Health Benefits

It's not like we need a specific reason to eat chocolate, but it doesn't hurt that studies are finding increasing health benefits associated with the popular indulgence. While chocolate is high in sugar and saturated fat, it does contain chemical compounds with proven benefits, so enjoy--in moderation--and expect to reap some of these rewards.

Improved Heart Health

A study in the Archives of Internal Medicine found that women over 70 who ate chocolate at least once a week were 35 percent less likely to suffer from heart disease during the survey period. Researchers suspect that the flavonoids found in chocolate, which are known to reduce blood pressure, likely improve overall cardiovascular health.

Reduced Liver Strain

These same flavonoids in dark chocolate that help decrease blood pressure can also reduce post-meal abdominal blood pressure spikes that strain the liver by widening and relaxing blood cells. A Spanish study of patients with end-stage liver disease showed that dark chocolate helped reduce some of the risks associated with conditions like cirrhosis.

Safer Pregnancy

Dark chocolate has been shown to help pregnant women avoid preeclampsia--a significant complication where blood pressure spikes to dangerous levels--by nearly 40 percent when consumed five times a week. Dark chocolate is especially rich in theobromine, which relaxes muscles and dilates blood vessels. As an additional benefit, it also seems to

improve circulation in the placenta.

Increased Endurance

Research out of the University of California, San Diego, demonstrated that mice given epicatechin, a flavonoid found in dark chocolate, could run for 50 percent longer than those who only drank water. The mice also grew new capillaries and mitochondria in their muscles, changes that explain their enhanced endurance capacity. Unfortunately, perhaps, for chocolate lovers, is that researchers say just one-sixth of 1 ounce of chocolate each day is the ideal serving size to receive this benefit.

Get on the Chi Machine and exercise today!

I have two services I offer before the massage to enhance the experience. One being The Chi Machine and also Skin Brushing.

The Chi Machine works as you lie down on the floor. You put your ankles onto the footrest and it moves your body from side to side. It's designed to help the Chi energy or the primal life energy within you flow, as it was intended to. Some of the benefits are spinal balance, improved immune system increased energy and weight loss.

\$1.00 a minute up to 5 minutes to begin with.

The primary benefit of Skin Brushing is it assists in exfoliation of the body's dead skin cells. Skin Brushing also stimulates the nerves of the skin and feels wonderful!

\$10.00 for 10-15 minutes.
